SUMMARY

The majority of medical terms are Turkish rooted for two reasons: 1- Turkish or proto-Turkish is the founding language of Western languages. I tried to prove this in my previous articles here. 2- Turkic peoples and the first physicians among them contributed greatly to the establishment of the medical discipline and the development of medicine. The Turkish roots of many of the basic medical terms originate from this practice and information. Here I am explaining the Turkish roots of about 679 medical terms. This includes words related to human organs and health.

INTRODUCTION

The term “**iatri**” meaning medicine is “**ota-otacılık**” (Old Turkic medicine). It comes from '**ot**': 'herb'. The first physicians of early humanity were shamans. ‘Shaman’ is a Turkic-Mongolian word. The Turks used to call it **Kam**, **Kaman**, **Baksi**. The vast majority of Turkic shamans were women. It is natural that the Turks have preserved the matriarchal cult until recently. And still the traces of this cult are strong among these peoples. The vast majority of the last remaining **kamans** are women.

This is why the vast majority of sorcerers in Europe was women. It is an extension of the same culture. Sorcerers are called "witches". The PIE root is shown as "**weg**". This is "**bügü-büyü**" in Turkish. **Bügü** > **magic**.

"**Mag, mags**" are the clergy class in Turkic **Medes**. This word is common to many Eastern and Western languages, including Chinese. The Turkish origin is "**bögü**". "**Bögü**" means physician, religious leader. Also "**bögü, bügü**" means magic. **Norm Kisamov** explained this long ago in the origin of the English words "**might**" and "**magic**".

It has a direct relationship with the Turkish concept of "**beg, bey**": lord. **Büyük** > **big** > **beg** > **mag** > **magic** > **beg (bağış)** > **weg** are linked. **Osman Karatay** explained all these in a special book just for them: "**Bey ve Büyücü**" (The Lord and Magician).

The "**pagan**" word comes from "**baksi**". **Baksi**: Turkish magician bards. "**Büyü**" is connected with "**weg**".

Legendary "**Lokman Doctor**" who mentioned in the Holy Book of the **Koran** was "**Ulu Kaman**" (Great Kaman) (**Adnan Atabek**). Turkic **Hippocrates' 'krat'** should probably be Turkic '**kurutBögü, bokrat**" mean physician. **Apa-Karut...** The father of the famous physician İbni Sina (**Avicenna**) was Turk. The word "**Sina**" is also Turkic. Nini Sina: physician in Sumer, 'sunu': physician in Egypt. 'Shen': China's first physician. **Sina**: physician. **Apa**: great person. **Apa-Sina** > **Avicenna (Atabek)**. "**Atasagun, ata-sagun**" means father of medicine, physician (**A. Atabek**). **Sagun** > **saga, sagacious, sagacity** > **sak** (wisdom)

20 starters to taste (**tat**) from the beginning: Ache > **aci**; acesso > **ekşi**; anima > **an**; ante > **önde**; atrium > **oda**; belly > **bel**; body > **beden**; bolus, poly > **bol**; bruise > **bere**; cephalo > **kafa**; cardia > **cörök, ürek**; cauda > **kudruk**; cave > **kovuk**; coat > **kat**; codex > **kütük**; curettage > **küreme**; delirium > **deli**; eu > **iyi**; ill > **illet**; iso > **eş, eşit**...

8 dimensions in proving that Turkish or Proto-Turkish is the founding language:

We broadly cover Western etymologists' explanations for Western words. Out of desperation, they were drowned in falsification. They try to analyze the world's languages ignoring the Turkish or some other "inconvenient" languages deliberately. They have been come to many wrong conclusions.

1- All their theses are in vain when we put their common words from **Sumerian, Hittite, Akkad** and **Etruscan**. The closest partner of these ancient languages is Turkish; 2- When we put the same commonality in **Native American languages** that separated from the continent 20 thousand years ago, the question of which language was the predecessor finds a definite answer. My works here have hundreds of examples from **Sanskrit** as well. ; 3- On top of that, when you find and show the sound change laws in the transition of Turkish roots to other languages, the level of evidence increases. The "it's a coincidence" defense becomes ridiculous when you show seven or eight examples with the same laws of change, which we show in 15-20-40-100 examples for each of these laws. **Adnan Atabek** is the best at discovering the laws of sound. Also I added some laws to his. Of course, all of them are open to scientific discussion. As long as we condemn the attitude of "deliberately not seeing, hearing or speaking" the clear evidence... ; 4- The maps and dates of the ancient migration routes of humanity, based on genetic studies published in the last 30-20 years, show the same truth. The most developed and comprehensive of these are the publications of **Anatole Klyosov**. Articles and books in this direction confirm the partnership codes that we have revealed in the field of language through chromosomes and DNA. And our evidence confirms theirs; 5- The same partnership is already present in cultural codes,

legends, religions, monuments, rugs, clothes, music, symbols, etc. ; 6- An important part of the words common with Western languages are also common to Turkish dialects living thousands of kilometers away from each other and speaking in separate countries. They developed in a conceptual unity between dialects and even within the same dialect. They branched out and formed clusters. This diversity is absent in other languages for many words. This is the proof that Turkish is the root for those words; 7- Turkish is an agglutinative language like other ancient languages Sumerian and Hittite. Agglutinative languages are the ancestors of the others. In another study, I showed that many features of Turkish grammar live in languages called "Indo-European"; 8- The similarity of the first accepted Turkish alphabet to the Etruscan and Latin alphabet (700s BC). Full harmony of the Latin alphabet with Turkish. The pointedness and steepness of the letter 'i' in this alphabet and in Turkish; The intense presence of the letter 'o' in words showing roundness...

METHOD

Now let's look at our examples. Let me state something up front. I do not consider the outsourced Western words etymology data to be fully reliable. Some of them are true, some exaggerated, some completely fake. They are the works of "scholars", most of whom do not know Turkish and have never researched Turkish and Turkic cultures. Turkish root is very rarely accepted. Sometimes known but deliberately ignored. I got most of the root and examples from "Etymonline- Online Etymology Dictionary". And part of it from "Oxford Dictionary: old version online".

The **red** ones are Turkish roots and words
